# FOREWORD

---

Dear ISCCM Member,

ISCCM is taking one more initiative to start the bimonthly journal IJCCR. Indian Journal of Critical Care Case Report (IJCCR) is a Peer reviewed, Open access Scientific journal published bimonthly under the auspices of Indian Society of Critical Care Medicine (ISCCM). This will be the second journal publication of ISCCM after the flagship journal Indian Journal of Critical Care Medicine (IJCCM). IJCCM will be concentrating on original research articles and IJCCR will publish Case reports and Case series in all areas of Critical Care Medicine including but not limited to anaesthesiology, perioperative care etc. The journal will also publish clinicopathological conference reports, Morbidity and Mortality meeting reports, Key bedside clinical discussion points and other areas related to clinical critical care medicine. The journal follows the December 2021 recommendations of the International Committee of Medical Journal Editors (ICMJE) for publication of medical scholarly work. The editorial board of the journal consist of eminent national and international faculty of repute in Critical Care Medicine. The full text of the articles published in the journal is available online at [www.ijccr.org](http://www.ijccr.org) as open access. IJCCR allows open access to its contents to all readers. Application for PubMed indexing with a provision for retrospective indexing will be applied for within a year of publication of IJCCR. I wish good luck for the success of the journal as India has tremendous capacity to report original and interesting cases. I also congratulate Dr Subhash Todi for being selected as 1st Editor-in-Chief of this journal.

Warm regards,

**Dr Rajesh Mishra**  
President ISCCM
